SWISS TIMING

FIGURE SKATING

JUDGING SYSTEM LEVEL 1

Tailor-made for international events

Level 1

The Level 1 Figure Skating Judging System has been designed to easily set up and handle regional Figure Skating events. The Level 1 system is the most basic level also called the "code of points" Judging System. It consists of 1 PC or laptop (an additional PC/laptop can be used as backup) and a printer. The PC runs the officially approved ISUCalcFS application. This system provides no network or audio connection between the Technical Specialist and the Judges´ stands. No video replay is included in this level. 3-5 Judges and 2 Accountants are necessary to run an event at level 1. Judges write down the score and give this information to the data operator who enters the scores in ISUCalcFS. This procedure causes a delay in the provision of the result by one Skater.

ISU Calc FS

Level 1A

The Level 1A system uses the same components as described for the Level 1 system. In addition, it includes an audio connection between the Technical Specialists and the Judges. The Specialist communicates the element to the Judges, and the operator enters the

Complete System

element in ISUCalcFS. Judges write down the score of the corresponding element and give this information to the ISUCalcFS data operator. At least 3 Judges, 2 Accountants, 1 Technical Specialist and 1 Controller are necessary to run an event at level 1A.
